Re: Millington Site Air Sampling

Dear Nigel:

As we discussed in our phone conversation on March 24, we will be attempting to perform ambient air sampling at the Millington Site on March 25 weather permitting. As I mentioned to you, our laboratory has advised us to have the samples analyzed by the Yamati Level 2 Method which is an EPA-approved Transmission Electron Microscopy (TEM) method. I understand from my phone conversation with you that this method is acceptable for the analysis of the ambient air samples at the Millington Site. We will still collect the samples in accordance with NIOSH Method 7402.

Please contact me if you have any questions about this change to the approved work plan. I will keep you informed of other potential air sampling dates.

Sincerely,

FRED C. HART ASSOCIATES, INC.
